

JIMENEZ, JERICO T.

Data Engineer / Analytics Engineer | SQL • Python • ETL • AWS • Docker • Snowflake | 0992-811-6796 | 
jimenezjerico227@gmail.com |  [\[Portfolio/Website\]](#)  [LinkedIn](#) |  [GitHub](#)

Data Engineer specializing in building end-to-end cloud data pipelines across **AWS (S3, RDS, Athena, Redshift)** using **Apache Airflow** and **dbt**. Experienced in designing **medallion architectures**, automating batch ETL workflows, and optimizing SQL workloads (~20% performance improvement). Proven ability to deploy **containerized, production-grade data platforms on Amazon EC2 using Docker**, with a strong focus on scalability, reliability, and data quality.

PROFESSIONAL EXPERIENCE

Data Analytics Engineer (Full Time)
Gulong.ph (Lica Group of Companies)

May 2026 – September 2026
Makati City, Metro Manila

Stack: GCP (BigQuery, Cloud Run), SQL, Google Analytics 4, Looker Studio, Google Sheet, Redash, Codex MCP

- **Business Intelligence and Reporting:** Developed executive dashboards and KPI reports using **Looker Studio, Power BI, and Google Sheets** by integrating **GA4 website analytics, sales performance, customer inquiries, chatbot (ManyChat) interactions, booking funnels, operational metrics, and customer service data**. Designed interactive reports with trend analysis, conversion metrics, drill-down capabilities, and automated reporting workflows to enable **data-driven decision-making** across management and business stakeholders.
- **Analytics Engineering and SQL Development:** Built and optimized **BigQuery SQL** models to extract, transform, aggregate, and validate data from **GA4 event data, website traffic, sales, and operational datasets**, producing reusable reporting tables, analytical views, and dashboard-ready datasets while improving query performance.
- **Automated Data Quality and Monitoring:** Designed automated validation and monitoring workflows for chatbot (ManyChat) and customer-service data, checking data completeness, missing records, duplicate entries, unexpected volume changes, and funnel consistency to improve data reliability and detect reporting issues early.
- **Automated Data Pipelines and Gold-Layer Modeling:** Designed reusable analytical data pipelines and Gold-layer datasets for marketing, chatbot, sales, and operational KPIs, standardizing transformed data into dashboard-ready outputs while applying cost-aware data processing and reducing duplicated reporting logic.
- **Process Improvement and Automation:** Streamlined recurring reporting and validation workflows using reusable SQL queries, structured reporting layers, and AI-assisted development tools, reducing manual analysis.

Junior Full-Stack Engineer OJT
Simplevia Technologies

Feb 2026 – Apr 2026
Pasig City, Metro Manila

- **Engineered a multi-module Accounting & Information System (AIS) for Makati City**, architecting complex Backend services and **Vue.js** interfaces for Journalization and Financial Reporting using **Laravel 9, MySQL, and Spatie RBAC** to ensure secure, role-based government data access.
- **Optimized data architecture by managing 30+ complex migrations** and relational schemas for budget appropriations and abstract collections, maintaining schema integrity and auditability across a production-scale system with 350+ existing migrations.
- **Improved query** and reduced processing time by ~20% through SQL optimization and efficient data modeling.

Junior Full-Stack Developer(OJT / Project Based)
Nephila Web Technology

August 2025 – Dec 2025
Quezon City, Metro Manila

- **HRIS & Payroll Automation:** Built and deployed core Payroll and HRIS modules using **Laravel 12 and MySQL**, automating manual reporting and payslip generation to streamline HR and Accounting workflows.
- **Data Migration & Performance Optimization:** Executed structured **Excel-to-CRM data migration** and optimized backend SQL queries, achieving a **20% reduction in processing time** and improving overall system efficiency.

Technical Skills

Languages: SQL, Python, Java (17), PHP, TypeScript, Kotlin.

Data Engineering: Snowflake (Cloud DW), Apache Airflow, dbt (Data Build Tools), ETL/ELT Pipelines, Data Modeling.

Cloud & DevOps: AWS (EC2, S3, RDS, Redshift, Athena), Docker, Docker Compose, Linux (Ubuntu), Git, Maven, Flyway.

Analytics & Reporting: Pandas, Power BI, Pentaho (Kettle), Jaspersoft, Excel.

EDUCATION:

Bachelor of Science in Information Technology

Available for full-time work | New Era University — Graduated Jun 2026
