

JIMENEZ, JERICO T.

Data Engineer / Backend Engineer | SQL • Python • ETL • AWS • Docker • Snowflake  0992-811-6796 |  jimenezjerico227@gmail.com |  [\[Portfolio/Website\]](#) |  [LinkedIn](#) |  [GitHub](#)

Backend & Data Engineer with experience building production-grade systems using **Java**, **PHP**, and **Python**. Expert in orchestrating **S3-to-Snowflake** data pipelines and containerized **ETL** processes. Proven track record in **SQL optimization (20% improvement)** and deploying scalable multi-service architectures on **AWS EC2** using **Docker**.

PROFESSIONAL EXPERIENCE

Junior Full-Stack Engineer Intern Simplevia Technologies

Feb 2026 – Apr 2026
Pasig City, Metro Manila

- **Engineered a multi-module Accounting & Information System (AIS) for Makati City**, architecting complex Backend services and **Vue.js** interfaces for Journalization and Financial Reporting using **Laravel 9**, **MySQL**, and **Spatie RBAC** to ensure secure, role-based government data access.
- **Implemented high-integrity financial workflows and state machines** for automated OR/JEV generation, ensuring 100% compliance with Philippine COA standards through rigorous multi-stage approval logic and dedicated action-history audit trails.
- **Optimized data architecture by managing 30+ complex migrations** and relational schemas for budget appropriations and abstract collections, maintaining schema integrity and auditability across a production-scale system with 350+ existing migrations.

Junior Full-Stack Developer (Internship / Project-Based) Nephila Web Technology

Aug2025 – Dec 2025
Quezon City, Metro Manila

- **System Automation:** Built and deployed core Payroll and HRIS modules using **Laravel 12** and **MySQL**, automating manual reporting and payslip generation to streamline HR and Accounting workflows.
- **Data Migration & Optimization:** Executed structured data migration from **Excel to CRM systems** and optimized backend SQL queries, resulting in a **20% reduction** in processing time.
- **Full-Stack Development:** Developed dynamic UI components using **Blade** and **Livewire** while providing production support for the live HRIS platform to ensure high system availability.

PROJECT EXPERIENCE

Cloud Data Pipeline (Enterprise Retail Data Pipeline)

 [Airflow Dashboard](#)

Stack: Apache Airflow, dbt, Snowflake, Python, Amazon S3, Docker, SQL

- **End-to-End Orchestration:** Designed and automated a multi-stage data pipeline using **Apache Airflow** to manage the lifecycle of retail datasets from **S3 ingestion to Snowflake Gold tables**.
- **Data Engineering & Architecture:** Implemented **Medallion Architecture** using **dbt** for modular SQL transformations, handling complex column mapping (12 sources to 3 targets) while ensuring **idempotency** to prevent data duplication.
- **Cloud Infrastructure:** Engineered a "Local-to-Cloud" workflow and managed production deployment on **AWS EC2** using **Docker Compose** for service isolation and consistent environment execution.

TechLaunch – IT Interview Preparation Platform (Capstone - Mobile & Web LMS)

Stack: Kotlin, Firebase Admin, Node.js, Express.js, React, JWT

- **Full-Stack Development:** Developed a native Android app and backend services featuring **JWT authentication**, custom validation middleware, and structured database models for quizzes and progress tracking.
- **Feature Integration:** Integrated in-app coding execution for Python, SQL, and Java using **Chaquopy** and external compiler APIs to facilitate real-time interview preparation.

Technical Skills

Languages: SQL, Python, Java (17), PHP, TypeScript, Kotlin.

Data Engineering: Snowflake (Cloud DW), Apache Airflow, dbt (Data Build Tools), ETL/ELT Pipelines, Data Modeling.

Cloud & DevOps: AWS (EC2, S3), Docker, Docker Compose, Linux (Ubuntu), Git, Maven, Flyway.

Analytics & Reporting: Pandas, Power BI, Pentaho (Kettle), Jaspersoft, Excel.

Education

Bachelor of Science in Information Technology

Available for full-time work | Expected Graduation: Apr 2026
